

Aarya Patel – Contest 7

For challenge 7, I first tried using the same pipeline as I did for 5 by combining the sentences and simply seeing how well the model could classify the text regardless of the relationships (obviously this didn't do well). I then did a bit of research and found a model called semBERT by stanford that was made for this type of classification. I formatted the data, added some implementation, and then created a script to organize the output data and format it to what the challenge needed as submission.
